Marlene H. Dortch, Secretary  
Federal Communications Commission  
RE: GN Docket NO. 12-354, RM-11778 and RM-11789

Dear Federal Communications Commission:

We provide Fixed Wireless Internet to rural customers in Santa Barbara and San Luis Obispo counties in California. We provide coverage to about 450 rural customers. These customers have access to satellite or nothing else usually.

We offer 5 Mbps up to 30 Mbps to these customers. We have invested greatly in the 3650-3700 MHz band, about \$100,000 to provide back bone to our customers. It is important to have frequencies to provide coverage to these rural customers. It is very critical to the coverage that we offer to provide 100 megahertz of mid-band spectrum. We are one of the only ways for these customers to get access to higher speed internet.

We oppose the CTIA and T-Mobile petitions. Most of the USA has access to these services. Please help these rural communities by providing frequencies so they can also have their children do their homework over the internet.

Let's not forget about the rural Americans. They also need access to the Web.

Best

Dan Rudnick  
President
